

## ADHD Week 6 - Completion Quiz

**Warning:** The hard deadline has passed. You can attempt it, but **you will not get credit for it**. You are welcome to try it as a learning exercise.

☐ In accordance with the Coursera Honor Code, I (Matthew Kramer) certify that the answers here are my own work.

### Question 1

People with ADHD tend to do worse on IQ assessments. On average, how much lower are their scores than age-matched non-ADHD peers?

- ☐ A. No difference
- ☐ B. 7-10 points
- ☐ C. 15-18 points
- ☐ D. 22-25 points
- ☐ E. Actually, people with ADHD have higher scores

### Question 2

Up to \_\_\_\_% of adolescents with ADHD may have symptoms of ADHD into adulthood.

- ☐ A. 30
- ☐ B. 45
- ☐ C. 50
- ☐ D. 65
- ☐ E. 80

### Question 3

Tina, an 11 year old with ADHD, dominates the family dinner conversation. Anytime either of her two sisters starts to speak, she interjects with a story of her own. This demonstrates trouble in which domain of executive functioning (EF)?

- ☐ A. Cognitive flexibility
- ☐ B. Organization
- ☐ C. Working memory
- ☐ D. Response inhibition
- ☐ E. Interference control

### Question 4

What is meant by the term "secondary executive functioning deficit" for people with ADHD?

- ☐ A. Difficulties arising from reduced practice and avoidance of EF skills/activities
- ☐ B. Difficulties arising from both NE and dopaminergic NT level deficits
- ☐ C. The second symptom reported in a patient interview that involves EF
- ☐ D. EF skills are less likely to be improved by treatment than primary deficits

### Question 5

TRUE OR FALSE: People with ADHD are known to live in the moment, often so much so that the future is neglected. Other terms for this phenomenon are Time Blindness, Temporal Neglect Syndrome, and Myopia to the Future

- ☐ True
- ☐ False

## Question 6

Alfred, a 19 year old with ADHD and point guard of his college basketball team, is running into a conflict with his coach. Alfred has had the ball stolen from him on several of his chest passes, and despite the coach's repeated suggestion to use bounce passes, Alfred has resisted the change in strategy. This demonstrates trouble in which domain of executive functioning?

- ☐ A. Cognitive flexibility
- ☐ B. Organization
- ☐ C. Working memory
- ☐ D. Self-monitoring
- ☐ E. Interference control

## Question 7

TRUE OR FALSE: ADHD is a clinical diagnosis, a complex condition with impairments in executive functioning.

- ☐ True
- ☐ False

☐ In accordance with the Coursera Honor Code, I (Matthew Kramer) certify that the answers here are my own work.
